Assignment 02

Software Security – IE5042

OAuth Authorization

Implementing a web application that consumes the service of OAuth Authorization Server and OAuth Resource Server

Jayasinghe R – MS21926808

Rajarathna S B M N - MS21926112

Prerequisite

1. To run .php application install XAMPP or any other web server in to your computer.
2. To edit code snippet, install a Text editor (Notepad, Sublime text)

SECTION II : **The Process of uploading a file to Google Drive using OAuth Authorization**

a. **Use XAMMPP server to run the application**

Start XAMPP

After XAMMPP server started successfully, open the browser using the following url

http://localhost

b. **Obtaining Credentials from the google API console**

Go to Google API Console usin the following link.

https://console.developers.google.com

Create a new project and configure consent screen.

Here select user type as **External** and update App information.

Next generate credentials. Create OAuth client ID giving application type as Web Application and adding a suitable name.

Under the section Authorized JavaScript origins add the URI as http://localhost.

Under Authorized redirect URIs add the URL as our application URI as http://localhost/ProjectGoogle/upload.html which is our developed web application.

Finally Create OAuth client ID, Client Secret and save it in a separate location where it is accessible.

Go to Google Client Library. Next Enable the following APIs which are necessary for this process.

- Google Drive API
- Google+ API

c. Configure Web Application with tokens

Here, save the OAuth Client ID in .json file which is related to login and upload page as follows.

```js
$(document).ready(function(){

    var clientId ="6                                    .apps.googleusercontent.com"

    var redirect_uri="http://localhost/ProjectGoogle/upload.html"

    var scope="https://www.googleapis.com/auth/drive"

    var url=""

    $("#login").click(function(){

        signIn(clientId,redirect_uri,scope,url);

    })

    function signIn(clientId,redirect_uri,scope,url){

        url = "https://accounts.google.com/o/oauth2/v2/auth?redirect_uri="+redirect_uri
        +"&prompt=consent&response_type=code&client_id="+clientId+"&scope="+scope
        +"&access_type=offline";

        window.location = url;

    }

});
```

Next save Client Secret in .json file which is related to redirect page of the web application as follows.

```javascript
1    $(document).ready(function(){
2
3        var clientId ="6████████████████████████████.apps.googleusercontent.com"
4
5        var redirect_uri="http://localhost/ProjectGoogle/upload.html"
6
7        var scope="https://www.googleapis.com/auth/drive"
8
9        var url=""
10
11
12       $("#login").click(function(){
13
14           signIn(clientId,redirect_uri,scope,url);
15
16
17       })
18
19
20       function signIn(clientId,redirect_uri,scope,url){
21
22           url = "https://accounts.google.com/o/oauth2/v2/auth?redirect_uri="+redirect_uri
23           +"&prompt=consent&response_type=code&client_id="+clientId+"&scope="+scope
24           +"&access_type=offline";
25
26           window.location = url;
27
28       }
29
30
31   });
32
33
```
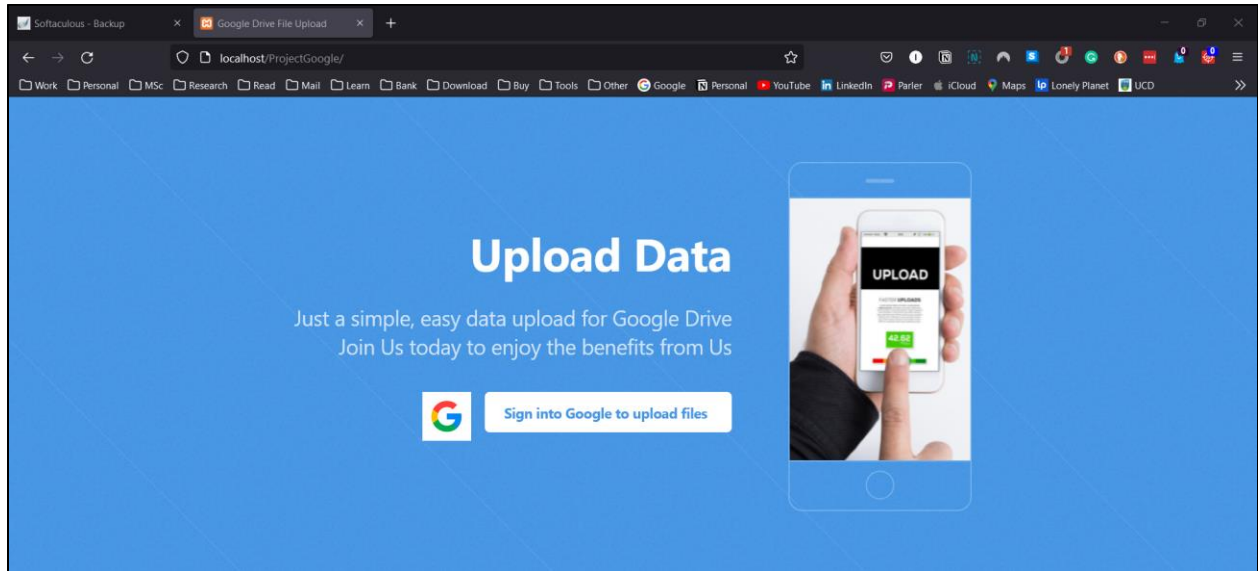

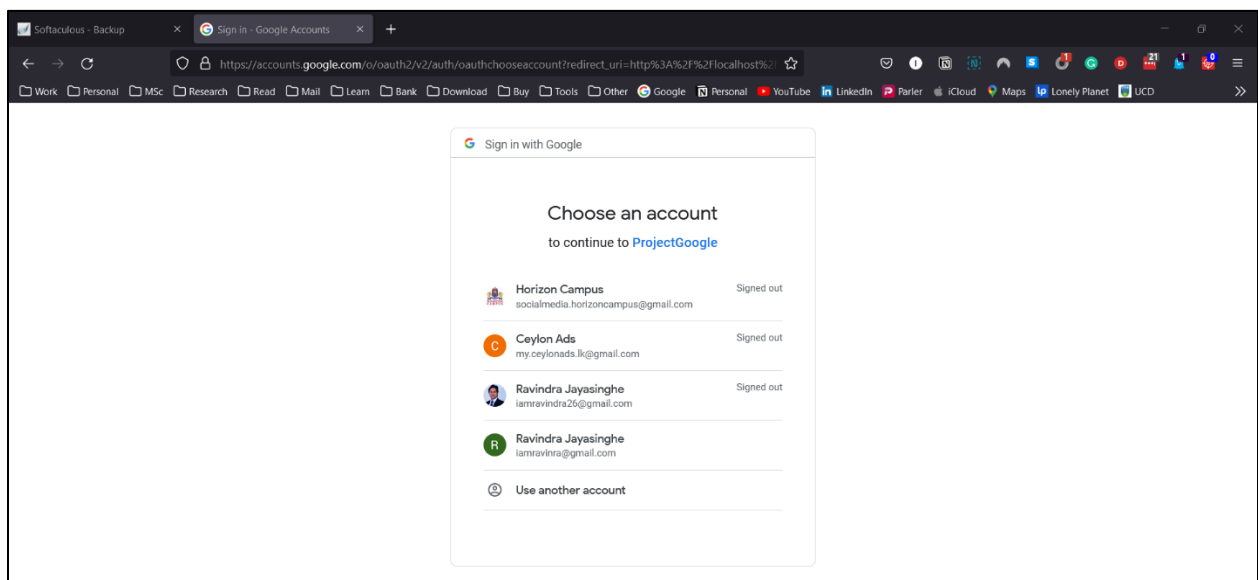

d. Publishing and Testing the Process

As the process still in testing mode, first need to Publish the application
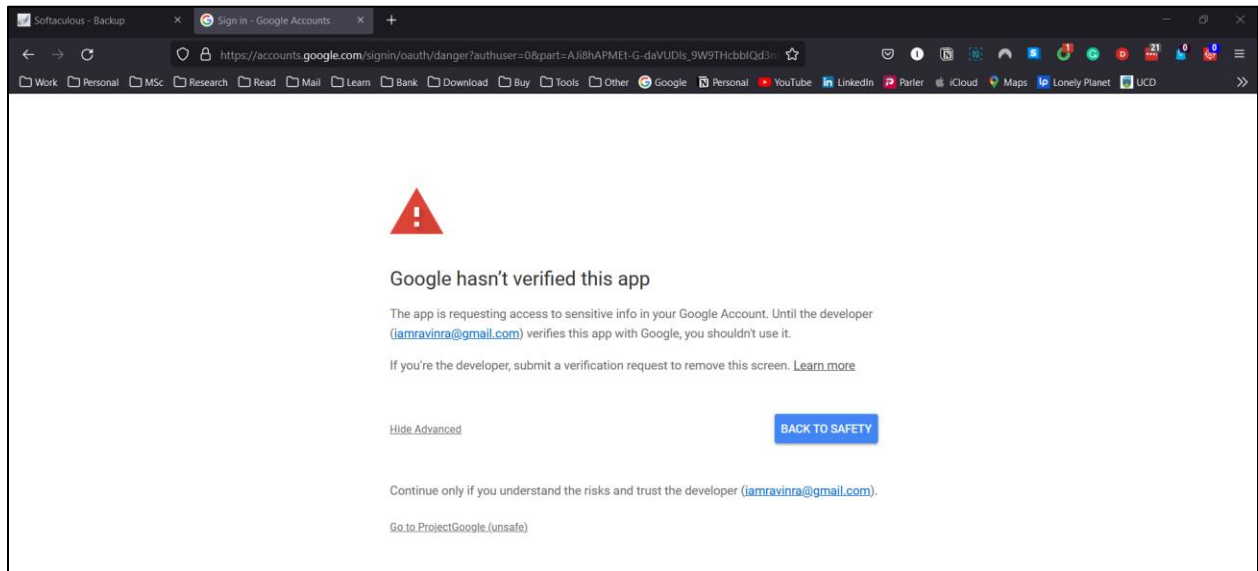

Next Start testing the process.

Now go to the URL http://localhost and click the button [Sign into Google to upload files]

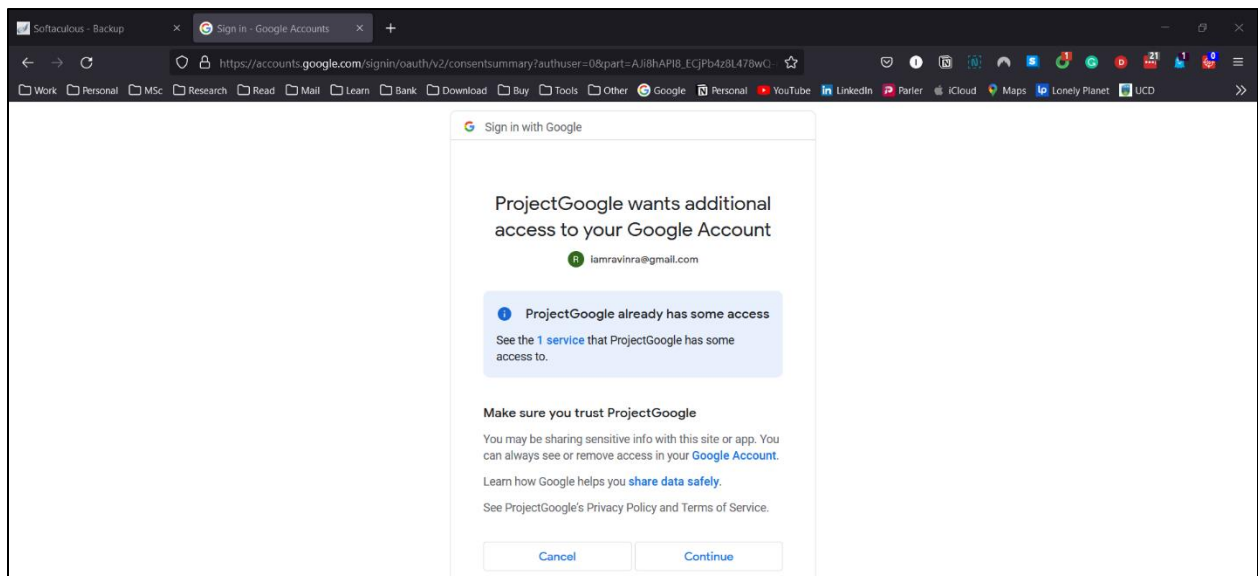

The button link moves to the Google Account Sign In page. Login to your existing Google account.

Next proceed with Google verification

After providing requested access permission you can continue by clicking continue button.
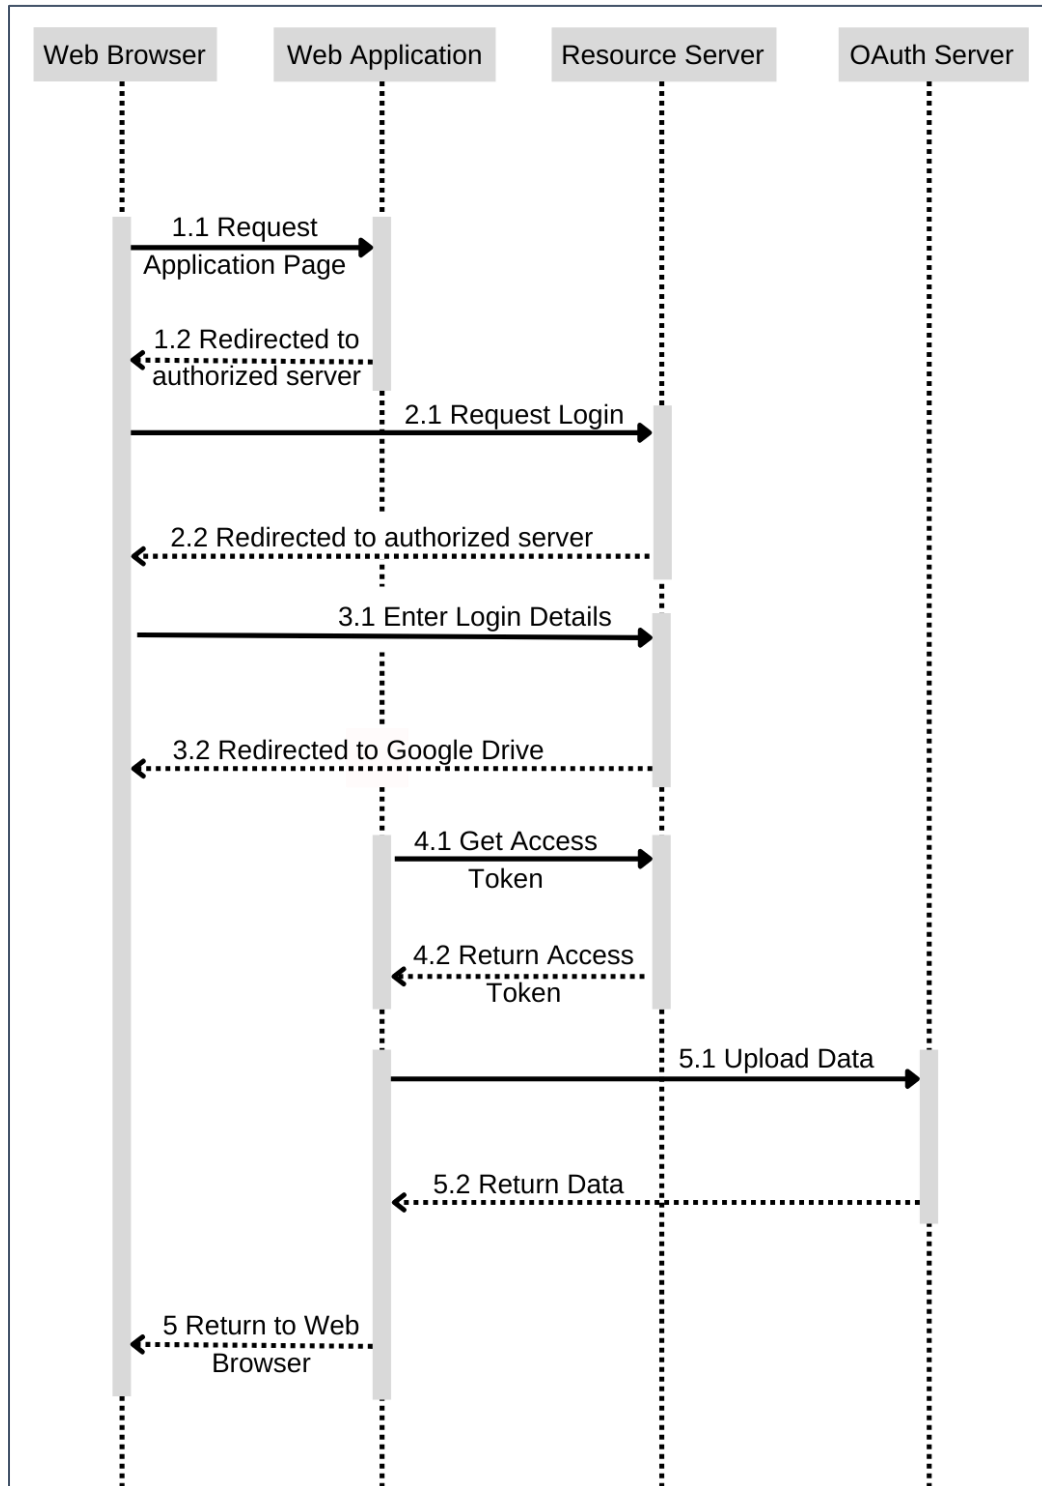

Next you will redirect to File Upload page.

Here, browse the computer and select a file and perform the upload.

Finally, you can see the uploaded file in your Google drive as follows.

**Sequential Diagram for the Process of OAuth Authorization using Web Application**

Web Browser	Web Application	Resource Server	OAuth Server

1.1 Request Application Page

1.2 Redirected to authorized server

2.1 Request Login

2.2 Redirected to authorized server

3.1 Enter Login Details

3.2 Redirected to Google Drive

4.1 Get Access Token

4.2 Return Access Token

5.1 Upload Data

5.2 Return Data

5 Return to Web Browser

SECTION IV : Sequential Diagram for the Process of OAuth Authorization using Web Application

START

Generate Client ID and Client Secret Associated with relevant Google Account

Develop Application based on Generated Client ID and Client Secret

Start File Upload Application

Select Google Account

Check Authentication

Check if Authentication succeed?

Generate User Authentication Token

Check if access to the account allowed?

View File Upload Page

Select "Choose File" Option to browse files

Select file from the computer

Click upload button

Upload file to Google Drive

STOP

SECTION V :   Reports:

1. Generated access token

2. Uploaded file

SECTION VI : Appendix
